PROFESSIONAL DIVER'S WATCHES

THE DIVEX PROFESSIONAL 200: A classic diver's watch design from Divex. This stainless steel watch has become a reliable favourite with professional divers. Rated to 200 meters, it is extremely robust with a directional rotating bezel affixed to a protected recessed crown. Looking into the glass face, the black facia with silver Divex logo provides high contrast against the luminous hands for enhanced visibility in poor light conditions. The Divex 200 also has a date display. It comes as standard with a strong rubber strap which is long enough to secure around wetsuits and drysuits.

THE DIVEX OFFSHORE 500: Designed with deep sea saturation divers in mind this stainless steel watch has become common on offshore diver's wrists working in extreme depths. Rated to 500 meters it is practically indestructible. A directional rotating bezel is affixed to a protected recessed crown. Looking through the toughened glass face, the black facia with Divex logo provides high contrast against the luminous hands for enhanced visibility in poor light conditions. The Divex 500 also has a date display. It comes as standard with a strong rubber strap which is long enough to secure around wetsuits, drysuits and hot water suits.

THE DIVEX SUBMARINER 200: This elegant design has proven to be popular with diver's across the board due to the 'dress watch' design coupled with the same robust quality that features throughout Divex's range. The all stainless steel design, including one-piece stainless steel bracelet strap is equally appropriate when either diving at depth or wearing at functions. The Submariner 200 is rated to 200 meters and in common with other Divex professional watches features a directional bezel and recessed crown providing greater protection to the facia. A day and date display is incorporated into the black watch face with Silver Divex Logo. Contrasting luminous hands permit enhanced visibility in poor light conditions.

TRASER WATCH

Used by Special Forces including the US Navy Seals

Nonstop for 25 years-guaranteed!

No pushing of buttons

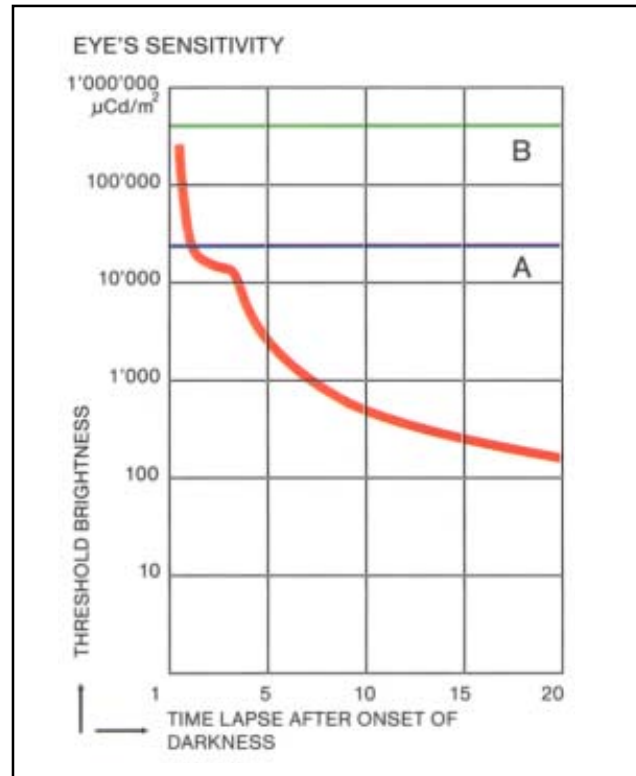

100 times brighter than conventional luminous markings

THE TRASER WATCH is the choice of Special Forces diving teams around the world. Constructed with traditional Swiss craftsmanship, the Traser is extremely accurate, reliable and rugged. It is pressure tested to depths of 200 msw. Built to withstand hostile combat environments, and the harsh conditions of military diving, the Traser performs in darkness like no other watch.

Tiny light sources, developed over the last 25 years, mark the hour minute and second hands as well as hour positions on the dial and bezel. These are proven to be 100 times brighter than conventional luminous paint markings.

Rigorous testing brought about official qualification for use in the US Military. Timing is by accurate Swiss quartz-analogue movement with five jewels. The ingenious case of special black polyimide with a double gasket crown confers a remarkable 200m water resistance. The ratcheting bezel rotates in one direction and features a bright Traser dot protected by a sapphire window. The case bottom is of stainless steel with a dull black finish, and the crystal of tempered mineral glass. Black Polymer straps with a stainless steel buckle are standard. Nylon webbing straps as used by the US Military are optional.
